

# A Closer Look at CSV Plans: How Do You Compare to Your Peers?

## Spring 2014 Truven Health Analytics™ Health Plan Survey Results

With an estimated 1.5 million enrollees already, cost-sharing variation (CSV) plans are important to the Accountable Care Act's success — but they represent complicated compliance tasks for health plans. As you plant the seeds for the upcoming policy year and beyond, now is a good time to dig into what your peers are doing — so you can ensure success as the CSV plan landscape changes and grows.

### The Process of Reconciliation

- Most plans choosing the Simplified method did so due to technical challenges in the Standard method (60%), or they wanted more time to evaluate, with the flexibility of selecting Standard in the future (60%).
- Of those that chose the Simplified method, 50% said they'll decide whether and when to use Standard once they develop technical capabilities to support it.
- Another 43% said they'd analyze their experience in late 2014 or after for declaration of methodology for 2015 or a later year.

### Participation: Number of Exchanges

All plans surveyed are participating in either one (80%) or two (20%) states in the exchange.

### Development of Interim Estimates

Nearly all (90%) of plans surveyed anticipated developing interim estimates of receivables and/or payables for financial statement purposes.

### Types of Plans Offered

- Respondents are offering a variety of tier plans on exchanges in 2014; all but one said they will offer bronze, silver, gold, and platinum plans.
- Most anticipate having more than 1,000 enrollees in silver plans on the exchange.
