

Improve Outcomes at the Point of Care With Predictive, Real-Time Analytics

Quickly identify at-risk patients and provide timely intervention to avoid adverse events.

Micromedex® 360 Care Insights includes:

- ✔ Pharmacy Intervention
- ✔ CareFocus™
- ✔ Infection Prevention
- ✔ Clinician Rounding

The Need

With increasing pressure to improve outcomes, reduce costs, and maximize reimbursements, quality-driven initiatives like Value-Based Purchasing and the Readmissions Reduction Program are changing the way hospitals and health systems do business.

The Solution

Micromedex 360 Care Insights offers an enterprise-wide platform that proactively monitors and conducts real-time clinical surveillance of data from multiple sources — for quick identification of at-risk patients and delivery of patient-specific clinical decision support (CDS) at the point of care.

How it works

Working with your hospital's disparate information systems, 360 Care Insights provides a clinical intelligence dashboard, combining these data into a single view to aid clinicians with workflow and daily routines.

The enterprise-wide platform looks for specific criteria, including structured and unstructured data, and generates alerts when patients meet these criteria.

The solution can be accessed remotely, online, and via mobile device 24/7. Data is unaffected by health information system or electronic health record downtime, so CDS processes can continue, helping improve patient safety and clinical outcomes.

Proven Success for Real Hospital Challenges

The following case studies highlight how we're helping hospitals pair real-time, actionable data and powerful analytics with patient-specific CDS to improve quality of care and patient outcomes.

These hospitals used the 360 Care Insights Suite to identify patients with specific challenges and then leveraged that data to address the issues effectively and quickly — saving time and money, and improving patient care and satisfaction.

			
CHALLENGE	Identify patients with early warning signs of malnutrition at admission and while in the hospital to improve care quality and outcomes, and increase revenue.	Identify patients undergoing surgery with fragility fracture at admission to reduce in-house mortality, improve bone health treatment and management, and prevent future fragility fractures.	Identify patients with congestive heart failure, acute myocardial infarction, or pneumonia who are at risk for readmission.
COURSE OF ACTION	Using 360 Care Insights, Freeman Health identifies patients who show early signs of malnutrition. Once patients are identified, clinicians have access to vital data and can leverage evidence-based guidelines to address and document the warning signs and avoid complications.	With 360 Care Insights, Roper St. Francis is able to identify patients with fragility fractures. Once patients are identified, clinicians evaluate each patient for intervention, including standardized disease-specific order sets, pre-op anesthesia evaluations, early discharge planning, and care follow-up procedures.	KishHealth leverages 360 Care Insights to identify patients at risk for readmissions. Once patients are identified, clinicians ensure appropriate interventions, procedures, and best practices are used during and after hospital admission.
RESULTS	<ul style="list-style-type: none">  Improved patient outcomes  Increased reimbursement by >\$30,000; Increased revenue by \$115,000 	<ul style="list-style-type: none">  Reduced mortality by 50%  Lowered 30-day readmission rates by 80% 	<ul style="list-style-type: none">  Reduced readmission rates by 50%
