

100 TOP HOSPITALS

15 Top Health Systems methodology highlights

9th Edition | April 24, 2017

About the study

The Truven Health 15 Top Health Systems is an annual, quantitative study identifying the 15 US health systems setting the highest national benchmarks on clinical quality and efficiency, based on our validated balanced scorecard. The study is produced by Truven Health Analytics®, part of the IBM Watson Health™ business, under the Truven Health 100 Top Hospitals® program. The goal of the study is to set standards of excellence and deliver insights to help system leaders achieve consistent top performance.

How we select the award winners

The main steps we take in selecting the health system winners are:

- 1. Building the database of hospitals, including special selection and exclusion criteria.**

This study focuses on short-term, acute care, nonfederal US hospitals—as well as cardiac, orthopedic, women’s, and critical access hospitals—that are members of health systems and treat a broad spectrum of patients. The data comes from public sources, including the Medicare Provider Analysis and Review (MEDPAR) data set and the Centers for Medicare & Medicaid Services (CMS) Hospital Compare data set.
- 2. Identify health systems.**

To be included in the study, a health system must contain at least two short-term, general, acute care hospitals, as identified using the 100 Top Hospitals specialty algorithm and after hospital exclusions have been applied. In addition, we also include any cardiac, orthopedic, women’s, and critical access hospitals that pass our exclusion rules. We identify the “parent” health system by finding the “home office” or “related organization,” as reported on hospitals’ 2015 Medicare cost reports. In all, 337 health systems were included in the 2017 study.
- 3. Aggregate patient-level data into health systems.**

To analyze health system performance, we aggregate data from all of a system’s included hospitals and then calculate a set of performance measures at the system level.
- 4. Classify health systems into comparison groups.**

To develop more relevant benchmarks for like health systems, we divide them into three comparison groups based on the total operating expense of the member hospitals.

The three comparison groups we use are:

Health system comparison group	Total operating expense	Number of systems in study	Number of winners
Large	> \$1.75 billion	109	5
Medium	\$750 million - \$1.75 billion	115	5
Small	< \$750 million	113	5
Total systems	n/a	337	15

5. Score health systems on a set of nine performance measures centered on quality of care, efficiency, and patient perception of care.

- Risk-adjusted inpatient mortality index
- Risk-adjusted complications index
- Core measures mean percent (stroke care and blood clot prevention)
- Mean 30-day risk-adjusted mortality rate (acute myocardial infarction [AMI], heart failure, pneumonia, chronic obstructive pulmonary disease [COPD], and stroke)
- Mean 30-day risk-adjusted readmission rate (AMI, heart failure, pneumonia, hip/knee arthroplasty, COPD, and stroke)
- Severity-adjusted average length of stay
- Mean emergency department throughput (wait time in minutes)
- Medicare spend per beneficiary
- Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) score (patient rating of overall hospital performance)

6. Determine 15 top performers by ranking health systems overall based on their aggregate performance (sum of individual measure ranks).

We rank health systems on their performance on each of the measures relative to the other in-study systems, by comparison group. We then weight each measure rank, sum the weighted ranks, and re-rank overall to arrive at a final rank for the system. The top five health systems with the best final rank in each of the three comparison groups are selected as the winners. All measures receive a weight of one in the final ranking process.

About Truven Health Analytics, part of the IBM Watson Health business

Truven Health Analytics®, part of the IBM Watson Health™ business, provides market-leading performance improvement solutions built on data integrity, advanced analytics, and domain expertise. For more than 40 years, our insights and solutions have been providing hospitals and clinicians, employers and health plans, state and federal government agencies, life sciences companies, and policymakers, the facts they need to make confident decisions that directly affect the health and well-being of people and organizations in the US and around the world. The company was acquired by IBM in 2016 to help form a new business, Watson Health. Watson Health aspires to improve lives and give hope by delivering innovation to address the world's most pressing health challenges through data and cognitive insights.

Truven Health Analytics owns some of the most trusted brands in healthcare, such as MarketScan®, 100 Top Hospitals®, Advantage Suite®, Micromedex®, Simpler®, and ActionOI®. Truven Health has its principal offices in Ann Arbor, MI; Chicago, IL; and Denver, CO. For more information, please visit truvenhealth.com.
