

Consulting and Service Program: Medication Management

Streamline Pharmacy Operations With Enhanced Medication Management

Hospitals and health systems are finding themselves in the midst of some of the biggest changes in history and are faced with the challenge of creating innovative strategies for patient care delivery and operational performance. This is often evident in the area of pharmacy operations, as costs, readmission rates, Meaningful Use requirements, and patient care coordination issues are of critical importance.

Truven Health Analytics™ offers a portfolio of **Medication Management** services to optimize an organizational approach for pharmacy cost-savings in areas such as supply chain, labor productivity, and revenue enhancements.

The Truven Health Approach Drives the Results You Want

Your organizational goals and challenges are unique, so your solutions need to be customized and adapted to your hospital — a one-size-fits-all approach won't do. Truven Health tailors your consulting engagement to your organization. Aspects of the Medication Management engagement can include:

- Pharmacy Departmental Review - Ensure that your organizational investment in high-quality clinical labor and drug expenditures results in maximum value.
- Medication Management Provider Strategies - Create an environment of provider collaboration to support the Medication Management goals for your organization, such as drug utilization and clinical consultations with pharmacists. These strategies are essential to realizing the maximum financial and clinical benefits.
- Medication Reconciliation Assessment - Reconcile patient medications through various venues of care and transition points, and ensure that the process doesn't negatively impact staff, patient safety, patient satisfaction, or readmissions. Medication Reconciliation is a regulatory standard for Centers for Medicare & Medicaid Services (CMS) and for certification in Meaningful Use Stage 2.

Your Organizational Needs Are Unique

Our proven methods in understanding and delivering evidence-based medication management initiatives across the care continuum enable us to provide the right consulting engagement for your organization. Our process includes:

Project Initiation — The Truven Health team will host a project initiation meeting where we will review objectives, requirements, and the project plan. We will also define roles and discuss timeframes.

Clinical, Productivity, Medication Reconciliation Review, and/or Supply Chain Assessments — We will conduct a thorough analysis of clinical, pharmacy, and efficiency outcomes, based on the data you provide.

Review of Findings — Upon completion of the project, we will summarize findings in a written report and present this information to your leadership.

Timeline for a Successful Program Implementation:
Approximately 4 to 8 weeks, depending on the size of your organization and the complexity of the engagement
